I wish to express my sincere thanks to the following people:

Prof AJ van Wijk, my promoter, who offered much time and guidance in a kind and patient manner, and encouraged precision. His contribution is much appreciated and regarded with respect.

Dr JP Schoeman, my co-promoter, for her valuable guidance, participation and motivation.

Mr Leonard Ramatlakane, Minister of Community Safety, for his concern about the children in the Western Cape, and his vision for the Hands Off Our Children Campaign.

Mrs Theresha Hanekom and colleagues from the Hands Off Our Children Campaign for their enthusiasm, co-operation and assistance. Thank you for still believing in miracles!

The personnel of The Centre for Play Therapy and Training in Wellington – Celest, Retha, Carlien and Bossi for their continuous support and expert advice.

The personnel from Citigate, in particular Natasha April, for their assistance in designing the board game. I am in awe of your creativity.

Dr Leslie Tutty, University of Calgary, USA, for her interest in the study and providing the CKAQ-RIII free of charge.

Prof Sandy Wurtele, University of Colorado, USA, for providing the WIST free of charge.

Hlanga Sotondoshe and Vuyokazi Ngalwa for the excellent Xhosa translation of the board game and questionnaires. Your support was invaluable.

Dr Mawande Dlali for the Xhosa translation of the summary – thank you for always assisting.
The personnel from PATCH Child Abuse Centre in Somerset West for their support and innumerable contributions. In particular, to Christiana for organising volunteers and believing in this project.

A special word of thanks to the field workers; Lewellyn, Deon, Natasha, Linda, Vuyokazi, Nontyatyambo, Neliswa and Miseka; who assisted me with the gathering and capturing of the data. Your encouragement and friendly assistance carried me through.

Marieanna le Roux for the statistical analysis of the data and her expert advice. Her time, guidance and motivation are much appreciated.

Nadia Williams for her assistance with the capturing of the data and her continuous support. Thank you for believing in me!

Karen Möller for the excellent editing of the dissertation.

The Western Cape Education Department for granting permission for the research to be conducted and their financial contribution.

The principals and educators of the various primary schools for their willing participation.

The children without whom this study would not have been possible. Thank you for your energetic and enthusiastic participation.

My friends who have walked this path with me – for always understanding.

My parents, brother and grandmothers for their sincere interest, encouragement and daily prayers. At last we can say “mission accomplished!” Thank you for sharing this with me.

My Heavenly Father, a God of miracles, for His abundant grace. You are my inspiration and strength.
Every child has the constitutional right to be protected from maltreatment, neglect or abuse. However, contrasting every child’s constitutional right is the escalating worldwide prevalence of child sexual abuse. The incidence of child sexual abuse must be reduced as far as possible by a multi-faceted approach, including effective prevention programmes which facilitate disclosure and empower children.

Since insufficient South African research on prevention programmes and preventative measures are available, the primary aim of the study was to develop a board game which can foster the prevention of sexual abuse of children. Scientifically, the motivation for the study was based on the improved understanding of the educational impact of a board game as primary prevention tool. The researcher developed the HOOC board game as part of the Hands Off Our Children Campaign. The board game, being practical and educational, has the goal of teaching children self-protective behaviours that can lower their probability of being abused.

A representative sample of 1697 grade four learners, nine to twelve years of age, were selected from the Metropole East region. In order to determine the educational impact of the HOOC board game, the results of the children on the Children's Knowledge of Abuse Questionnaire-Revised (CKAQ-RIll) in the experimental and control groups were compared. The experimental group (n=407) received the board game as intervention. The control group (n=1290) did not receive any intervention. Performance on the test were also compared with gender and ethnicity.

According to the obtained results, the HOOC board game correlated with the improvement of knowledge in an acceptable manner. No significant correlations were found between the scores of the tests and gender. The gender of a learner had no significant impact on the learner's ability to learn and retain information. A significant correlation was found between the difference in scores on the tests and the ethnic grouping of learners. It therefore seems that the ethnicity of a learner relates to the improvement of knowledge. Considering the overall results of the study, the use of the HOOC board game as preventative measure against the sexual abuse of grade four learners is
acceptable. The HOOC board game offers a significant and valid preventative measure for sexual abuse of children in the middle age group within the South African context.

PLAY TECHNIQUE

GESTALT PLAY THERAPY
Elke kind het die grondwetlike reg om teen mishandeling, verwaarlosing of misbruik beskerm te word. Die stygende voorkoms van die seksuele molestering van kinders kontrasteer egter hierdie stelling. ‘n Multi-dissiplinêre benadering word benodig om die kommerwekkende voorkoms van seksuele molestering aan te spreek. Effektiewe voorkomingsprogramme wat fokus op die bemagtiging van kinders, is ‘n essensiële aspek van ‘n multi-dissiplinêre benadering.

Aangesien onvoldoende Suid-Afrikaanse navorsing oor voorkomingsprogramme en voorkomende maatreëls beskikbaar is, is die primêre doelwit van die studie om ‘n bordspel te ontwikkel wat as voorkomende maatreël teen die seksuele misbruik van kinders gebruik kan word. Die motivering vir die studie is dus gebaseer op die opvoedkundige impak van die bordspel as primêre voorkomings-instrument. Die navorser het die HOOC bordspel ontwikkel as deel van die ‘Hands Off Our Children’ Veldtog. Die opvoedkundige bordspel het ten doel om kinders op ‘n praktiese wyse self-beskermende gedrag te leer.

‘n Verteenwoordigende steekproef van 1697 leerders, nege- tot twaalf-jarige ouderdom, is vanuit die Metropool Oos geselekteer. Ten einde die opvoedkundige impak van die HOOC bordspel te bepaal, is die resultate van die kinders op die ‘Children’s Knowledge of Abuse Questionnaire-Revised’ (CKAQ-RIII) in die eksperimentele en kontrole groep met mekaar vergelyk. Die eksperimentele groep (n=407) het die bordspel as intervensie ontvang terwyl die kontrole groep (n=1209) geen intervensie ontvang het nie. Die resultate is ook met geslag en etnisiteit vergelyk.

Die resultate dui aan dat die HOOC bordspel bevredigend korreleer met die verbetering van kennis. Geen beduidende korrelasies blyk tussen die resultate van die toets en geslag te wees nie. Die gevolgtrekking kan dus gemaak word dat geslag nie ‘n beduidende impak op die vermoë van ‘n leerder het ten opsigte van die aanleer en herroeping van inligting nie. Die resultate van die drie etniese groepe het beduidend verskil en die gevolgtrekking kan gemaak word dat die etniese groepering van ‘n leerder die aanleer en verbetering van kennis beïnvloed.
Op grond van die resultate kan die gevolgtrekking gemaak word dat die HOOC bordspel ‘n toepaslike voorkomings-instrument teen die seksuele misbruik van graad vier leerders is. In die Suid-Afrikaanse konteks is die HOOC bordspel dus ‘n geldige voorkomingsmaatreël om die seksuele misbruik van kinders in die middelkinderjare aan te spreek.
Wonke umntwana unelungelo elisemthethweni lokuba akhuselwe ekuphathweni kakubi, ukungakhathalelwa, okanye ekuphathweni gadalala. Ngako oko, ukuphikisana namalungelo asemthethweni omntwana yinto ekhula ezweni lonke jikelele negqhelekileyo yokuphathwa gadalala komntwana ngokwesonso. Isehlo sokuphathwa gadalala komntwana ngokwesondo kufuneka sincitshiswe kangangoko ngeendlela ezininzi, kubandakanya iinkqubo zokhuselo ezinefuthe ezenza kube lula ukubhengeza nokuxhobisa abantwana.

Isampulu yabafundi abali-1697 bencwadi yesine, abaneminyaka ye-9 ukuya kwi-12, bakhethwe kwelingqi ye-Metropole East. Ukuze kufunyanwe ifuthe lemfundo yomdlalo webhodi ye-HOOC, kuye kwatheleksiswa iziphumo zabantwana kwi-Children’s Knowledge of Abuse Questionnaire (CKAQ-RIII) kumagqela ovavanyo kwakunye namanye nje. Iqela lovavanyo (n=407) lifumene umdlalo webhodi njengento engenelelayo. Iqela nje (n=1290) khange lifumene nto engenelelayo. Indlela ekusetyenzwe ngayo kuvavanyo iye yatheleksiswa nesini kunye nobuhlanga.

Ekujongeni iziphumo jikelele zesifundo, ukusetyenziswa komdlalo webhodi ye-HOOC
njengomlinganiselo wokhusekelo ekuphathweni gadalala kubafundi bencwadi yesine kuyamkeleka.
Umdlalo webhodi ye-HOOC unika amathuba abalulekileyo okulinganisela ukuphathwa gadalala
kwabantwana kwiqela leminyaka ephakathi kwimeko yaseMzantsi Afrika.
DECLARATION OF TERMS

Within the context of the study:

i) The feminine form of pronoun refers throughout to both sexes. Throughout the study, to avoid confusion, the researcher refers to abused children as female and the alleged perpetrators as male.

ii) The term ‘primary school’ is used interchangeably with ‘elementary school’.

iii) The term ‘children’ is used interchangeably with ‘learners’ when referring to an educational setting.

iv) The term ‘therapist’ is used interchangeably with ‘counsellor’.

v) The term ‘imaginative play’ is used interchangeably with ‘pretend play’.

vi) The term ‘ethnicity’ or ‘ethnic grouping’ is used instead of ‘culture’ as the researcher aimed to encapsulate a broader and more sensitive approach.
