Declaration

I declare that THE RELATIONSHIP BETWEEN AFFECTIVE FACTORS AND THE ACADEMIC ACHIEVEMENT OF STUDENTS AT THE UNIVERSITY OF VENDA is my own work and that all the sources that I have used or quoted have been indicated and acknowledged by means of complete references.

Acknowledgements

I would like to extend my thanks and appreciation to the following people:

* My wife, Elizabeth, for support and tolerance for my absences from home due to many study visits I had to undertake to UNISA (Pretoria).

* All my children for understanding that study is a life-long process and for the support they have shown.

* My colleagues in the Centre for Student Counselling, Social and Academic Development at UNIVEN, for their inspiring words of support, suggestions and comments throughout the research process. I thank the typist, whose dedication to typing transformed this research initiative into this document.

* Staff in the Department of Statistics at UNIVEN, for the excellent work they have done on statistical analysis of data.

* All members of staff who co-operated very well during the administering of the questionnaires to students.

* All students who participated as respondents in the research. Their enthusiasm and the positive attitude they have shown are commendable.

* My supervisor, Professor S.M. Mellet, whose advices, suggestions, comments and encouragement played a major role in sustaining my achievement motivation throughout the research process. He is really the type of a person one can rely on. In fact, during all our meetings in his office I experienced his assistance as that of a teacher and a father at the same time.
Quotable quotes

1. “Human behaviour is always a product of how people see themselves and the situations in which they are involved. Although this fact seems obvious, the failure of people everywhere to comprehend it is responsible for much of human misunderstanding, maladjustment, conflict and loneliness. Our perceptions of ourselves and the world are so real to us that we seldom pause to doubt them”.

2. “The best teacher is one who, through establishing a personal relation, frees the student to learn. Learning can only take place in the student, and the teacher can only create the conditions for learning. The atmosphere created by a good interpersonal relationship is the major condition for learning”.

Summary

The purpose of this study is to investigate the relationship between affective factors and the academic achievement of students at the University of Venda. Self-concept, motivation and attitude are affective factors selected for the study. The general aim of the study is to determine the role of self-concept, motivation and attitude in students’ academic achievement and ultimately come up with some recommendations for enhancing these factors. The theoretical investigation indicates that there is a relationship between students’ self-concepts, motivation, attitude, and academic achievement. Similarly, the empirical investigation has revealed that there is a significant correlation between self-concept, motivation, and academic achievement of students. It was, for example, found that female students are significantly more motivated than their male counterparts. It is therefore essential that educationists should understand the differences in motivational orientations of their students in order to facilitate effective learning.

Key terms

* Academic achievement
* Affective factors
* Attitude
* Educationists
* Learning
* Measurement of academic achievement
* Motivation
* Relationship
* Self-concept
* University students
List of acronyms

* ACH: Achievement
* ATT: Attitude
* ES: Environmental Sciences
* HSS: Human and Social Sciences
* MNS: Maths and Natural Sciences
* MOT: Motivation
* MSL: Management Sciences and Law
* SC: Self-concept
* UNIVEN: University of Venda
# TABLE OF CONTENTS

## Chapter 1: Introductory orientation and statement of the problem

1.1 Introduction ................................................................. 1
1.2 History and background of the University of Venda .............. 1 - 2
1.3 Problem analysis .......................................................... 3
1.3.1 Awareness of the problem ............................................. 3
1.3.2 Demarcation of the study .............................................. 3 - 4
1.3.3 Preliminary review of literature ..................................... 4
1.4 Aims of the research ....................................................... 4
1.4.1 General aim .............................................................. 4-5
1.4.2 Specific aims ............................................................ 5
1.4.3 Aims of the theoretical investigation ............................. 5
1.4.4 Aims of the empirical investigation .............................. 5 - 6
1.5 Statement of the problem ................................................ 6
1.6 Methodology ............................................................... 6
1.6.1 Research design ......................................................... 7
1.6.2 Measuring instrument ................................................ 7
1.6.3 Sample and sampling method ..................................... 7
1.6.4 Data collection and analysis ....................................... 7
1.6.5 The hypotheses ........................................................ 7 - 8
1.6.6 The pilot study ........................................................ 8
1.7 Core concepts of the study ............................................. 8 - 11
1.8 The research programme .............................................. 12

## Chapter 2: The role of affective factors in learning and academic achievement

2.1 Introduction ................................................................. 13 - 14
2.2 Affect as emotions and feelings ....................................... 14 - 15
2.3 Feeling and emotion as indicators of meaning ..................... 15
2.4 Affective factors in learning .......................................... 16 - 17
2.5 Affective development ................................................. 17 - 18
3.2.6.4 Leadership and initiative .................................................................42
3.2.6.5 Identification versus alienation ......................................................42
3.3 Attitude .................................................................................................43
3.3.1 Introduction ......................................................................................43
3.3.2 Defining attitude ............................................................................43
3.3.2.1 An attitude is a mental and neural state of readiness ..................43
3.3.2.2 An attitude is organized through experience .........................44
3.3.2.3 An attitude exerts a directive or dynamic influence ...............44
3.3.2.4 An attitude has an influence upon the individual’s response to all objects and situations with which it is related ..........................44
3.3.3 Attitudes and their functions .........................................................44
3.3.3.1 Utilitarian or adaptive function ................................................44
3.3.3.2 Economy or knowledge function ............................................45
3.3.3.3 Expressive, self-realising function .......................................45
3.3.3.4 Ego-defensive function ..............................................................................45
3.3.4 Components and structure of attitude ........................................45
3.3.4.1 The components of attitude ..................................................45-48
3.3.4.2 The structure of attitudes ....................................................48-50
3.3.5 Attitude formation .............................................................................50-51
3.3.6 The relation of attitudes to behaviour ...........................................51-52
3.3.7 The drive value of attitudes ..........................................................52-53
3.3.8 Measuring attitudes ............................................................................53
3.3.8.1 Developing own measures ..................................................53
3.3.8.2 Using existing psychometric tests ......................................53
3.4 Motivation ............................................................................................54
3.4.1 Introduction .....................................................................................54
3.4.2 Definition of motivation ..............................................................54-56
3.4.3 Relation of motivation to learning and performance ..................56
3.4.4 Intrinsic and extrinsic motivation ...............................................57
3.4.4.1 Extrinsic motivation ............................................................57
3.4.4.2 Intrinsic motivation ..............................................................57
3.4.4.3 Some characteristics of the learner who is intrinsically motivated
(Mellet, 1986:62): ........................................................................................................58
3.4.4.4 Some characteristics of a learner who is extrinsically motivated
(Mellet, 1986:64): ........................................................................................................58
3.4.4.5 Differences between intrinsic and extrinsic motivation .................59
3.5 Summary ........................................................................................................59
3.5.1 Self-concept ................................................................................................60
3.5.2 Attitude ........................................................................................................60
3.5.3 Motivation ....................................................................................................60

Chapter 4: The empirical investigation
4.1 Introduction .....................................................................................................60
4.2 Planning and execution of the empirical investigation .........................60
4.2.1 The research group .....................................................................................60 - 61
4.2.2 Ethical considerations ..................................................................................61
4.2.3 The pilot study ..............................................................................................61
4.2.4 Measurement of academic achievement .....................................................62
4.2.5 The questionnaire .........................................................................................62
4.2.5.1 Construction of the questionnaire ..............................................................62 - 63
4.2.5.2 Format of the questionnaire .......................................................................63 - 64
4.2.5.3 Items for self-concept (SC) .......................................................................64 - 65
4.2.5.4 Items for motivation (MOT) .....................................................................65
4.2.5.5 Items for attitude (ATT) ...........................................................................65 - 66
4.2.6 Administering of the questionnaire ..............................................................66
4.3 Data analysis ...................................................................................................66
4.3.1 Methods used for analysing data .................................................................66
4.3.2 Item analysis ................................................................................................66 - 70
4.3.3 Reliability of the questionnaire ..................................................................70 - 71
4.3.4 Testing of the hypotheses and results .........................................................71
4.3.4.1 Hypothesis 1 ..............................................................................................71 - 74
4.3.4.2 Hypothesis 2 ..............................................................................................74 - 75
4.3.4.3 Hypothesis 3 ..............................................................................................................75 - 77
4.3.4.4 Hypothesis 4 .............................................................................................................77
4.4 Summary .........................................................................................................................78 - 79

Chapter 5: Conclusions, implications for educationists and recommendations

5.1 Introduction .....................................................................................................................81
5.2 The theoretical study: summary of findings, discussion and conclusion.................81 - 84
5.3 The empirical study: summary of findings, discussion and conclusion.................84 - 86
5.4 Recommendations and implications ...........................................................................86 - 91
5.5 Limitations of the study .................................................................................................91
5.6 Suggestions for future research ..................................................................................91-92
5.7 Concluding remarks .....................................................................................................92

Appendix 1: The questionnaire ............................................................................................93 - 96
Appendix 2: Declaration of consent .....................................................................................97
