ACKNOWLEDGEMENTS

God, the Almighty, for granting me excellent health to complete this study.

My ailing Mother, for being a solid, blessed base in my life.

My brothers and sisters, for endlessly and selflessly believing in me.

The staff of the Centre for Student Counselling of the University of Venda, for their support and encouragement. Thank you Humbulani, for always being willing to help.

Mr Bvuma, for his willingness to edit this thesis.

My promoter and mentor, Professor H.E.Roets, not only for her encouragement and sound guidance during the completion of this thesis, but also for providing a relationship in which I could develop my personal and professional skills.
THERAPEUTIC TECHNIQUES FOR TREATMENT OF ADOLESCENTS WITH REBELLIOUS BEHAVIOUR

SUMMARY

THERAPEUTIC TECHNIQUES FOR TREATMENT OF ADOLESCENTS WITH REBELLIOUS BEHAVIOUR

Student: Lethabo Violet Mathye
Promoter: Professor H.E. Roets
Degree: Doctor of Education (Psychology of Education)
University: University of South Africa
Department: Educational studies

This study focuses on the therapeutic interventions by mental health practitioners when faced with rebellious youths.

Rebelliousness refers to the act of defying lawful authority or a resistant way of relating to authority or convention. It is manifested in, amongst others, withdrawal, deviance, delinquency, antisocial behaviour, and suicide.

To date there are no interventions for rebellious youths per sé. Rebellious youths are often treated with traditional strategies which are often ineffective and show little promise for eliminating rebellious behaviour. Research has revealed that teen problem behaviours stem from “life-problems” such as psychosocial stressors. Therefore treating the adolescent for substance abuse, for example, is treating him/her for the wrong reasons. It is no surprise that many adolescents who have undergone intervention programmes for specific behaviour problems relapse soon after they are released from the programmes.

The study focuses on integrating different strategies in order to combat rebelliousness in adolescence and beyond. This holistic approach argues that all treatments share certain curative processes. Therefore each treatment works best when it is combined with other aspects of treatment. For this reason, individual, family and group therapy were combined together with school strategies.

The results of this study indicate that combining procedures that are designed to improve problematic behaviour in teenagers are viable forms of treatment.
