ACKNOWLEDGEMENTS

I praise, magnify and glorify God Almighty for enabling me to complete this study in a miraculously short period.

I would also like to extend my appreciation to the following for their support:

- Doctor J H Roos and Mrs L V Monareng, UNISA, for guiding and directing me during the study.

- Mr B Deda and the Board of Directors of Medical Investments Limited for granting me permission to carry out the research at Avenues Clinic.

- Doctor Haruzivishe for helping me interpret the statistics.

- Mrs S Makumbe for encouraging me, commenting and editing the research.

- My friends, my mother for being a pillar for me, my two daughters Farai and Chipo for their concern, my son Tawanda whom I named ‘Barnabas’ for being such an encouraging person.

- My husband T. J. for being so very patient, supportive, encouraging and above all for never giving up on me. God bless him.

- Caroline Mapfumo for typing the study with so much patience and diligence.

My very sincere thanks to you all for being there for me. May God richly bless the works of your hands.
The study investigated how patients in the general wards of the Avenues Clinic perceive the nursing care they received. The study objectives were to identify how nurses in the general wards of the Avenues Clinic respond to patients’ needs and if the nursing care received from the nurses matched patients’ expectations. The study further sought to determine if patients would return to use Avenues Clinic nursing services and recommend services to family and friends.

Data was drawn from 87 respondents by randomly distributing 100 questionnaires to three thirty-four bedded general wards of the Avenues Clinic.

Findings of the study indicated that the majority of patients who received nursing care that was in line with their expectations would also return to use Avenues Clinic nursing services as well as recommend the services to family and friends. The theme “optimal care” was used to consolidate patient satisfiers while “suboptimal care” was used to describe patient dissatisfiers.

Key Concepts

Perception, patient expectation, nursing care, patient satisfaction, nursing competence, nurses’ responsiveness, general ward, patient, registered nurse.
DECLARATION

I declare that PERCEPTION OF NURSING CARE RECEIVED BY IN PATIENTS AT THE AVENUES CLINIC (HARARE IN ZIMBABWE). A DESCRIPTIVE STUDY. Is my own work and that all sources that I have used or quoted have been indicated and acknowledged by means of complete references and that this work has not been submitted before for any other degree at any other institution.
