ACKNOWLEDGEMENTS

First and foremost, acknowledgement is due to the Creator, Source of knowledge, and wisdom. Throughout the process I was aware of His Grace, supporting and guiding me through the very difficult, often frustrating, process of learning. I am left with a deep sense of gratitude; grateful for the privilege of learning afforded to me.

I would also like to thank the following people for their support over the course of completing this dissertation:

- Frans Cilliers, for his tireless support and encouragement throughout the process. His experience as a researcher and his well established knowledge of the systems psychodynamic perspective has been invaluable.
- My mother who has throughout my life been my best friend and my support structure. Without her support and encouragement I would not have had the time or the energy to devote to this endeavour.
- My husband, the most unselfish person I have ever met, who has been my cheerleader, my confidante, and my encouragement in the really difficult times. The light at the end of the tunnel was him standing alone with a candle, waiting for me. I am grateful for the patience he showed and the love I felt throughout this time.
- My children, who sacrificed their time with me, so that I could complete this. I am eternally grateful for their love and understanding.
- Zainab Savahl, my friend who has always without question been there to help me in the most practical ways. I am grateful for her kindness in providing me with just what I needed, when I needed it.
- Elize Koche, who came to my rescue on many occasions during the completion of this dissertation. She assisted me with the analysis by calmly clarifying methods and terminology when all the words just looked the same and I could no longer make sense of it. She again rescued me by proof-reading the document to ensure that I had achieved the objectives initially set.
- To Razaanah Meyer, who transcribed the tape recording of the focus group and Aadiela, who checked the transcripts.
DECLARATION

I, the undersigned, hereby declare that this dissertation titled, “A systems psychodynamic perspective on dealing with change amongst different leadership styles”, is my own work, and that all sources that I have used or quoted have been indicated and acknowledged by means of complete references.

ABSTRACT

A SYSTEMS PSYCHODYNAMIC PERSPECTIVE ON DEALING WITH CHANGE AMONGST DIFFERENT LEADERSHIP STYLES

By

FAYRUZ ABRAHAMS
SUPERVISOR: PROF F.VAN.N. CILLIERS
DEGREE: MCOMM (INDUSTRIAL AND ORGANISATIONAL PSYCHOLOGY)

This study focussed on the systems psychodynamic perspective of how different leadership styles (paranoid, schizoid, depressive, compulsive and histrionic) deal with change as measured in a focus group consisting of four psychologists. How the different styles deal with change was compared to the definitions established to distinguish the key tendencies apparent during change for each style. Content analysis was applied to determine an integrative profile for each style during change. Though each of the styles responds in distinctly different ways when faced with change, all show a heightened level of reaction on the interpersonal dimension, indicating that change dramatically affects leader-follower relationships. The findings highlight the reversion during change to extreme self-interest and a tendency to use the team to serve this self-interest. Recommendations were presented to create reflective space so the leader may, through insight, be in a position to establish collaborative leader-follower relationships that are open to change.

KEY TERMS

systems psychodynamics, anxiety, leadership, change, paranoid, schizoid, depressive, compulsive, histrionic, leadership styles.
