

**THE RELATIONSHIP BETWEEN PERSONALITY VARIABLES
AND WORK PERFORMANCE OF CREDIT CONTROLLERS
IN A BANK**

by

OLGA COETZEE

submitted in part fulfilment of the requirements
for the degree of

MASTER OF COMMERCE

in the subject

INDUSTRIAL PSYCHOLOGY

at the

UNIVERSITY OF SOUTH AFRICA

SUPERVISOR: PROF M DE BEER

NOVEMBER 2003

Student number: **508-956-5**

I declare that THE EFFECT OF PERSONALITY ON THE WORK PERFORMANCE OF CREDIT CONTROLLERS IN A BANK is my own work and that all the sources that I have used or quoted have been indicated and acknowledged by means of complete references.

ACKNOWLEDGEMENTS

The research for this study was conducted at Bankfin, a business unit of the Absa group. I wish to express my gratitude to the management and staff members of Bankfin who assisted in the collection of data, especially Magda van de Want who was of great help at a very critical stage of the research. My sincere appreciation goes also to my superiors at Absa People Management for allowing me to do this work.

My appreciation and admiration has grown daily for the dear ones who are my support system and without whose understanding and patience my studies would have been impossible: Claus, Nicola, Hans-Gustav, Papa and Maggie.

A special thank you to my supervisor, Prof M de Beer, for the professional and prompt assistance, the moral support and the patience.

SUMMARY

The primary aim of the research has been to determine whether there is a relationship between personality variables as measured by the Occupational Personality Questionnaire (OPQ32i) and the work performance of credit controllers in a bank. Work performance was measured by means of internal company data sources. A literature review was used to verify whether there is a theoretical relationship between personality and work performance and strong evidence was found.

The sample consisted of 89 credit controllers. The relationship between personality variables and work performance was determined by means of correlation studies and multiple regression analyses. Results are reported both in terms of statistical significance and effect sizes.

Key terms: personality, work performance, credit control, personality trait theory, Sixteen Personality Factors questionnaire (16PF), Occupational Personality Questionnaire (OPQ).
