ABSTRACT

Recognising the enormous challenges in South Africa confronting the nursing of the mentally ill, the project was conducted in a public hospital in Gauteng. The purpose of the research was to describe professional nurses’ perception of nursing mentally ill people in a general hospital setting and was carried out amongst a sample size of 124 professional nursing staff using a self-administered tool.

The study looked at four different types of perceptions guided by categories of conceptual framework proposed by Mavundla (2000:1569-1570), namely perception of self, perception of patients, perception of environment and perceived feelings.

The study found that the majority of professional nurses have a predominantly positive self-perception of nursing mentally ill people in a general hospital, although a significant number have a negative perception of patients, the nursing environment and perceived feelings. Lack of knowledge, skill and experience affect the nursing care of mentally ill people in the general hospital.

Key words

General hospital, nursing, mentally ill people, quantitative research.
ACKNOWLEDGEMENTS

I would like to express my greatest gratitude to the following:

- God the Almighty, for creating me, encouraging, protecting, guiding me and without whose grace this study would never have been conceived.
- My parents, the late Sechocha and Masechaba Lethoba, for supporting me spiritually, am proud of who I am today.
- I am deeply indebted to my supervisors, Prof TR Mavundla and Prof RM Ganga-Limando for their consistent guidance, conscientious supervision love and support.
- Myself, an opportunity for reflection of inspiration through the will power from the Almighty.
- My family, brother and sister and close relatives, friends for their encouragement, prayers and support.
- My colleagues, who participated in the study, for their valuable time, support and input.
- Ms Rina Coetzer and Ms Iauma Cooper, for sacrificing their precious time, typing and critically editing the manuscript.
Dedication

I dedicate this dissertation to my parents the late Sechocha Lethoba and Masechaba Lethoba
