LIST OF TABLES

Table 2.1: Terminology used to refer to sex-role identity type and trait configurations

Table 2.2: Terminology related to the analysis / etiology of the sex-role identity dynamics underlying relationship satisfaction

Table 2.3: Sex-role identity components or traits of psychological gender

Table 2.4: Symbols for four possible sex-role identity types that individuals can hold

Table 2.5: Homo-gender sex-role identity relationships

Table 2.6: Hetero-gender sex-role identity relationships

Table 2.7: Mixed sex-role identity relationships: homo-gender masculinity and hetero-gender femininity

Table 2.8: Mixed sex-role identity relationships: homo-gender femininity and hetero-gender masculinity

Table 3.1: Overview of various aspects of empirical work done on sex-role identity and relationship satisfaction (Reported as Annexure 3.1)

Table 3.2: Marital adjustment scores of both spouses for 16 sex-role identity type configurations

Table 8.1: Number of respondents and couples in each target group (sub-sample)

Table 8.2: Number of respondents according to relationship status by target group (sub-sample)

Table 8.3: Number of male and female respondents by target group (sub-sample)

Table 8.4: Number of respondents according to family or relationship stage by target group (sub-sample)

Table 8.5: Number of children living with couples (partners) by target group (sub-sample)

Table 8.6: Number of years that partners spent in their relationship by target group (sub-sample)

Table 8.7: Number of partners according to age at previous birthday by target group (sub-sample)

Table 8.8: Number of partners in each population group by target group (sub-sample)

Table 8.9: Number of partners according to mother tongue by target group (sub-sample)

Table 8.10: Number of partners according to living area by target group (sub-sample)

Table 8.11: Number of partners according to qualification level by target group (sub-sample)

Table 8.12: Number of partners according to personal gross income by target group (sub-sample)

Table 9.1: Respondents’ score distribution on the DAS as measure of relationship satisfaction by target group (sub-sample)

Table 9.2: Respondents’ mean scores on the DAS sub-scales by target group (sub-sample)

Table 9.3: Respondents’ score distribution on the self-constructed three-item relationship satisfaction scale by target group (sub-sample)

Table 9.4: Correlation matrix for scores of respondents on the DAS and its sub-scales

Table 9.5: Correlation matrix for scores of respondents on the three-item relationship satisfaction scale and its items

Table 9.6: Correlation coefficients for link between the three-item relationship satisfaction scores and
Table 9.7: Correlation matrix for the three items of the short relationship satisfaction scale and the DAS and its sub-scales

Table 9.8: Correlation matrix for the three items and total score of the short relationship satisfaction scale and selected DAS items

Table 9.9: Respondents’ score distribution for self-rated and ascribed masculinity as measured on the BSRI by target group (sub-sample)

Table 9.10: Respondents’ score distribution for self-rated and ascribed femininity as measured on the BSRI by target group (sub-sample)

Table 9.11: Respondents’ score distribution for self-rated and ascribed masculinity as measured on the ACL-SRI by target group (sub-sample)

Table 9.12: Respondents’ score distribution for self-rated and ascribed femininity as measured on the ACL-SRI by target group (sub-sample)

Table 9.13: Correlation matrix for the scores of respondents on the self-report masculinity and femininity scales of the BSRI and ACL-SRI

Table 9.14: Correlation matrix for the scores of respondents on the ascribed masculinity and femininity scales of the BSRI and ACL-SRI

Table 9.15: Correlation matrix comparing respondents’ self-reported and ascribed masculinity and femininity scores within and across the BSRI and ACL-SRI

Table 9.16: Correlation matrix comparing all ACL-SRI scale and sub-scale scores

Table 9.17: Correlation matrix comparing respondents’ sex-role identity types calculated from their responses to the BSRI and ACL-SRI

Table 9.18: Frequency distribution of respondents’ sex-role identity types calculated from their responses to the BSRI and ACL-SRI by technique applied

Table 9.19: Response distribution for the construct of moodiness or depression by target group (sub-sample)

Table 9.20: Response distribution for the construct of emotional stability by target group (sub-sample)

Table 9.21: Response distribution reflecting respondents’ feelings about sex by target group (sub-sample)

Table 9.22: Response distribution reflecting respondents’ life satisfaction by target group (sub-sample)

Table 9.23: Response distribution reflecting respondents’ job satisfaction by target group (sub-sample)

Table 9.24: Response distribution for the construct of extraversion by target group (sub-sample)

Table 9.25: Response distribution for the construct of independence by target group (sub-sample)

Table 9.26: Response distribution for the construct of problem solving through communication by target group (sub-sample)

Table 9.27: Response distribution reflecting respondents’ preference for relationship type by target group (sub-sample)

Table 9.28: Response distribution reflecting the relationship type of the parents of respondents by target group (sub-sample)

Table 9.29: Response distribution reflecting the extent of relationship satisfaction experienced by the
fathers of respondents by target group (sub-sample)

Table 9.30: Response distribution reflecting the extent of relationship satisfaction experienced by the mothers of respondents by target group (sub-sample) 227

Table 9.31: Response distribution reflecting respondents’ health status by target group (sub-sample) 228

Table 9.32: Frequencies of respondents according to the classification of couples in terms of relationship satisfaction category as measured with the DAS by target group (sub-sample) 230

Table 9.33: Frequencies of respondents according to the classification of couples in terms of relationship satisfaction category as measured with the short relationship satisfaction scale by target group (sub-sample) 230

Table 9.34: Frequencies of respondents according to their classification in terms of the sex-role identity type combinations of couples based on self-rated and ascribed BSRI measurements by target group (sub-sample) 230

Table 9.35: Frequencies of respondents according to their classification in terms of the sex-role identity type combinations of couples based on self-rated and ascribed ACL-SRI measurements by target group (sub-sample) 231

Table 9.36: Frequencies of respondents according to the highest adaptive sex-role identity type available in either partner of a couple based on self-rated and ascribed BSRI measurements by target group (sub-sample) 231

Table 9.37: Frequencies of respondents according to the highest adaptive sex-role identity type available in either partner of a couple based on self-rated and ascribed ACL-SRI measurements by target group (sub-sample) 232

Table 9.38: Cross-tabulated frequencies showing the relationship between identical and non-identical sex-role identity traits and type and relationship satisfaction among couples (n=80 couples) 233

Table 9.39: Mean scores for couple averages on relationship satisfaction by dyadic sex-role identity combination as measured on the various instruments 235

Table 9.40: Mean scores for partners on average dyadic relationship satisfaction by sex-role identity trait combination as measured on the DAS and BSRI (self-ratings) by target group (sub-sample) 235

Table 9.41: Comparison of relationship satisfaction scores between couples in which both sex-role identity traits and only femininity are identical between partners by sub-sample 238

Table 9.42: Comparison of relationship satisfaction scores between couples in which both sex-role identity traits and only masculinity are identical between partners by sub-sample 238

Table 9.43: Comparison of relationship satisfaction scores between couples in which partners have identical and non-identical sex-role identity types by sub-sample 239

Table 9.44: Comparison of relationship satisfaction scores between couples in which partners have either identical femininity or identical masculinity sex-role identity traits by sub-sample 240

Table 9.45: Comparison of relationship satisfaction scores between couples in which partners have an identical femininity trait and non-identical sex-role identity types by sub-sample 240

Table 9.46: Comparison of relationship satisfaction scores between couples in which partners have an identical masculinity trait and non-identical sex-role identity types by sub-sample 241

Table 9.47: Comparison of relationship satisfaction scores between couples where one partner has androgyny or femininity as highest adaptive sex-role identity type by sub-sample 242

Table 9.48: Comparison of relationship satisfaction scores between couples where one partner has androgyny or masculinity as highest adaptive sex-role identity type by sub-sample 242
Table 9.49: Comparison of relationship satisfaction scores between couples where partners are androgynous or undifferentiated as the highest adaptive sex-role identity type by sub-sample

Table 9.50: Comparison of relationship satisfaction scores between couples where one partner has femininity or masculinity as highest adaptive sex-role identity type by sub-sample

Table 9.51: Comparison of relationship satisfaction scores between couples where partners are feminine or undifferentiated as the highest adaptive sex-role identity type by sub-sample

Table 9.52: Comparison of relationship satisfaction scores between couples where partners are masculine or undifferentiated as the highest adaptive sex-role identity type by sub-sample

Table 9.53: Frequency distribution of number of couples in which partners have an identical sex-role identity type by sub-sample

Table 9.54: Comparison of relationship satisfaction scores between couples where partners have identical androgynous or feminine sex-role identity types by sub-sample

Table 9.55: Comparison of relationship satisfaction scores between couples where partners have identical androgynous or masculine sex-role identity types by sub-sample

Table 9.56: Comparison of relationship satisfaction scores between couples where partners have identical androgynous or undifferentiated sex-role identity types by sub-sample

Table 9.57: Comparison of relationship satisfaction scores between couples where partners have identical feminine or masculine sex-role identity types by sub-sample

Table 9.58: Comparison of relationship satisfaction scores between couples where partners have identical feminine or undifferentiated sex-role identity types by sub-sample

Table 9.59: Comparison of relationship satisfaction scores between couples where partners have identical masculine or undifferentiated sex-role identity types by sub-sample

Table 9.60: Comparison of relationship satisfaction scores between partners in which both sex-role identity traits and only femininity are identical by sex and sub-sample

Table 9.61: Comparison of relationship satisfaction scores between partners in which both sex-role identity traits and only masculinity are identical by sex and sub-sample

Table 9.62: Comparison of relationship satisfaction scores between partners in which sex-role identity types are identical and non-identical by sex and sub-sample

Table 9.63: Comparison of relationship satisfaction scores between partners in which only the femininity and only the masculinity sex-role identity trait is similar by sex and sub-sample

Table 9.64: Comparison of relationship satisfaction scores between partners with identical femininity traits and non-identical sex-role identity types by sex and sub-sample

Table 9.65: Comparison of relationship satisfaction scores between partners with identical masculinity traits and non-identical sex-role identity types by sex and sub-sample

Table 9.66: Comparison of relationship satisfaction scores between partners with identical masculinity traits and non-identical sex-role identity types by sex and sub-sample

Table 9.67: Comparison of relationship satisfaction scores between partners with identical femininity traits and non-identical sex-role identity types by sex and sub-sample
Table 9.70: Cross-tabulated frequencies showing the relationship between partners’ highest adaptive sex-role identity type and personal relationship satisfaction
Table 9.71: Mean scores for respondents on relationship satisfaction by the highest adaptive sex-role identity type present in either partner of a dyad as measured on the various instruments
Table 9.72: Mean individual relationship satisfaction scores by highest adaptive dyadic sex-role identity type as measured on the DAS and BSRI (self-ratings) by sex and target group (sub-sample)
Table 9.73: Comparison of personal relationship satisfaction scores with either partner in a couple having androgyne or femininity as highest adaptive sex-role identity type by sex and sub-sample
Table 9.74: Comparison of personal relationship satisfaction scores with either partner in a couple having androgyne or masculinity as highest adaptive sex-role identity type by sex and sub-sample
Table 9.75: Comparison of personal relationship satisfaction scores with either partner in a couple having androgyne or both an undifferentiated sex-role identity type as the highest adaptive combination by sex and sub-sample
Table 9.76: Comparison of personal relationship satisfaction scores with either partner in a couple having femininity or masculinity as highest adaptive sex-role identity type by sex and sub-sample
Table 9.77: Comparison of personal relationship satisfaction scores with either partner in a couple having femininity or both an undifferentiated sex-role identity type as the highest adaptive combination by sex and sub-sample
Table 9.78: Comparison of personal relationship satisfaction scores with either partner in a couple having masculinity or both an undifferentiated sex-role identity type as the highest adaptive combination by sex and sub-sample
Table 9.79: Cross-tabulated frequencies showing the relationship between partners’ identical sex-role identity types and personal relationship satisfaction
Table 9.80: Mean scores for respondents on relationship satisfaction according to identical sex-role identity types present in both partners of a dyad as measured by the BSRI (self-ratings)
Table 9.81: Mean personal relationship satisfaction scores by identical dyadic sex-role identity type as measured on the DAS and BSRI (self-ratings) by sex and target group (sub-sample)
Table 9.82: Frequency distribution of correspondence in sex-role identity type between partners in couples by sub-sample
Table 9.83: Comparison of personal relationship satisfaction scores for partners with an identical androgyne or feminine sex-role identity type by sex and sub-sample
Table 9.84: Comparison of personal relationship satisfaction scores for partners with an identical androgyne or masculine sex-role identity type by sex and sub-sample
Table 9.85: Comparison of personal relationship satisfaction scores for partners with an identical androgyne or undifferentiated sex-role identity type by sex and sub-sample
Table 9.86: Comparison of personal relationship satisfaction scores for partners with an identical feminine or masculine sex-role identity type by sex and sub-sample
Table 9.87: Comparison of personal relationship satisfaction scores for partners with an identical feminine or undifferentiated sex-role identity type by sex and sub-sample
Table 9.88: Comparison of personal relationship satisfaction scores for partners with an identical masculine or undifferentiated sex-role identity type by sex and sub-sample

x List of tables, figures and annexures
Table 9.89: Summary of findings on testing the central hypotheses about the relationship between dyadic sex-role identity combinations and individual relationship satisfaction by sex and sub-sample 274

Table 9.90: Relationship satisfaction scores (DAS) of respondents by family stage, sex-role identity type / trait (in)congruence and selected sub-sample 283

Table 9.91: Relationship satisfaction scores (DAS) of respondents by family stage, highest adaptive sex-role identity type and selected sub-sample 284

LIST OF ANNEXURES

Annexure 3.1: Overview of various aspects of empirical work done on sex-role identity and relationship satisfaction 307

Annexure 7.1: The Dyadic Adjustment Scale 319

Annexure 7.2: Single-item technique for assessing relationship satisfaction 321

Annexure 7.3: The Bem Sex-Role Inventory 321

Annexure 7.4: Prinsloo Guttman-rating for sex-role identity 322

Annexure 7.5: Questionnaire for demographic and other contextual information 323

Annexure 7.6: Background information and covering letter 327

Annexure 9.1: Detailed findings from variance analysis and hypothesis testing with regard to the direct (non-dyadic) association between sex-role identity and relationship satisfaction by sub-group (see Section 9.4) 328

Annexure 9.2: Statistics (p-values) underpinning the summary (in Section 9.6) of the relative effect of the extraneous variables, with sex-role identity, on relationship satisfaction 331
