HARDWARE, SOFTWARE AND PEOPLEWARE

South African Institute of Computer Scientists and Information Technologists Annual Conference
25 – 28 September 2001
Pretoria, South Africa

Edited by Karen Renaud, Paula Kotzé & Andries Barnard
University of South Africa, Pretoria
Table of Contents

Message from the SAICSIT President ................................................................. iv
Message from the Chairs ................................................................................... vi
Conference Organisation ................................................................................... vii
Referees ............................................................................................................. viii

Keynote Speakers

Cyber-economies and the Real World ................................................................. xi
  Alan Dix
Computer-aided Instruction with Emphasis on Language Learning ................. xiv
  Lut Baten
Internet and Security Trends............................................................................ xv
  Arthur Goldstuck
The Future of Data Compression in E-technology ............................................. xvi
  Nigel Horspool
Strategic Planning for E-Commerce Systems: Towards an Inspirational Focus .... xvii
  Raymond Hackney

Research Papers

Human-Computer Interaction / Virtual Reality
  The Development of a User Classification Model for a Multi-cultural Society........ 1
    M Streicher, J Wesson & A Calitz
  Real-Time Facial Animation for Virtual Characters ........................................ 11
    D Burford & E Blake
  The Effects of Avatars on Co-presence in a Collaborative Virtual Environment .... 19
    J Casanueva & E Blake

Education
  Structured Mapping of Digital Learning Systems ............................................ 29
    E Cloete & L Miller

Formal Methods
  The specification of a multi-level marketing business ..................................... 35
    A van der Poll & P Kotzé
  Finite state computational morphology - the case of the Zulu noun .................. 45
    L Pretorius & S Bosch
  Combining context provisions with graph grammar rewriting rules: the three-dimensional case .......................................................... 54
    A Barnard & E Ehlers

Human-Computer Interaction / Web Usability
  Web Site Readability and Navigation Techniques: An Empirical Study ............. 64
    P Licker, R Anderson, C Macintosh & A van Kets
  Jiminy: Helping Users to Remember Their Passwords .................................... 73
    K Renaud & E Smith

Information Security
  Computer Security: Hacking Tendencies, Criteria and Solutions .................... 81
    M Botha & R von Solms
  An access control architecture for XML documents in workflow environments .... 88
    R Botha & J Eloff
Graphics and Ethics
Model-based Segmentation of CT Images .......................................................... 96
O Marte & P Marais
Towards Teaching Computer Ethics ................................................................. 102
C de Ridder, L Pretorius & A Barnard

Human-Computer Interaction / Mobile Devices
Ubiquitous Computing and Cellular Handset Interfaces – are menus the best way forward? ........................................................................................................... 111
G Marsden & M Jones
A Comparison of the Interface Effect on the Use of Mobile Devices .................. 120
J Franken, A Stander, Z Booley, Z Isaacs & R Rose
The Effect of Colour, Luminance, Contrast, Icons, Forgiveness and Closure on ATM Interface Efficiency ................................................................. 129
A Stander, P van der Zee, & Y Wang

Object Orientation
JavaCloak - Considering the Limitations of Proxies for Facilitating Java Runtime Specialisation ........................................................................................................... 139
K Renaud

Hardware
Hierarchical Level of Detail Optimization for Constant Frame Rate Rendering........ 147
S Nirenstein, E Blake, S Windberg & A Mason
A Proposal for Dynamic Access Lists for TCP/IP Packet Filtering ....................... 156
S Hazelhurst

Information Systems
The Use of Technology to Support Group Decision-Making in South Africa .......... 165
J Nash, D Gwilt, A Ludwig & K Shaw
Creating high Performance I.S. Teams .................................................................. 172
D C Smith, M Becker, J Burns-Howell & J Kyriakides
Issues Affecting the Adoption of Data Mining in South Africa ............................. 182
M Hart, E Barker-Goldie, K Davies & A Theron

Information Systems / Management
Knowledge management: do we do what we preach? ...................................... 191
M Handzic, C Van Toorn, & P Parkin
Information Systems Strategic Planning and IS Function Performance: An Empirical Study ................................................................. 197
J Cohen

Formal Methods
Implication in three-valued logics of partial information .................................... 207
A Britz
Optimal Multi-splitting of Numeric value ranges for Decision Tree Induction ....... 212
P Lutu
Abstracts of Electronic Papers

Lessons learnt from an action research project running groupwork activities on the Internet: Lecturers' experiences .............................................................. 221
   T Thomas & S Brown

A conceptual model for tracking a learners' progress in an outcomes-based environment
   R Harmse & T Thomas

Introductory IT at a Tertiary Level – Is ICDL the Answer? ................................. 222
   C Dixie & J Wesson

Formal usability testing – Informing design .......................................................... 222
   D van Greunen & J Wesson

Effectively Exploiting Server Log Information for Large Scale Web Sites ............ 223
   B Wong & G Marsden

   E von Solms & J Eloff

A Pattern Architecture, Using patterns to define an overall systems architecture .......................................................... 224
   J van Zyl & A Walker

Real-time performance of OPC ............................................................................. 224
   S Kew, & B Dwolatzky

The Case for a Multiprocessor on a Die: MoaD ................................................... 225
   P Machanick

Further Cache and TLB Investigation of the RAMpage Memory Hierarchy .......... 225
   P Machanick & Z Patel

The Influence of Facilitation in a Group Decision Support Systems Environment ...... 226
   T Nepal & D Petkov

Managing the operational implications of Information Systems ............................. 226
   B Potgieter

Finding Adjacencies in Non-Overlapping Polygons ............................................. 226
   J Adler, GD Christelis, JA Deneys, GD Konidaris, G Lewis, AG Lipson, RL Phillips,
   DK Scott-Dawkins, DA Shell, BV Strydom, WM Trakman & LD Van Gool

iii
Message from the SAICSIT President

The South African Institute of Computer Scientists and Information Technologists (SAICSIT) was formed in 1982 and focuses on research and development in all fields of computing and information technology in South Africa. Now in the 20th year of its existence, SAICSIT has come of age, and through its flagship series of annual conferences provides a showcase of not only the best research from the Southern-African region, but also of international research, attracting contributions from far afield. SAICSIT does, however, not exist or operate in isolation.

More than 50 years have passed since the first electronic computer appeared in our society. In the intervening years technological development has been exponential. Over the last 20 years there has been a vast growth and pervasiveness of computing and information technology throughout the world. This has led into the expansion and consolidation of research into a diversity of new technologies and applications in diverse cultural environments. During this period huge strides have also been made in the development of computing devices. The processing speed of computers has increased thousand-fold and memory capacity from megabytes to gigabytes in the last decade alone. The Southern African region did not miss out on these developments.

It is hardly possible for such quantitative expansion not to bring a change in quality. Initially computers had been developed mainly for purposes such as automation for the improvement of processing, labour-reduction in production and automation control of machinery, with artificial intelligence, which made great strides in the 1980s, seen as the ultimate field to which computers could be applied. As we moved into the 1990s it was recognized that such an automation route was not the only direction in the improvement of computers. The expansion of processing power has enabled image data to be incorporated into computer systems, mainly for the purpose of improving human utilisation. For most computer technologies of the 1990s, including the Internet and virtual reality, automation was not the ultimate purpose. Humans were increasingly actively involved in the information-processing loop. This involvement has gradually increased as we move into the 21st century. Development of computer technology based not on automation, but on interaction, is now fully established.

The method of interaction has significantly changed as well. The expansion of computer ability means that the same function can be performed far more cheaply and on smaller computers than ever before. The advent of portable and mobile computers and pervasive computing devices is ample evidence of this. The need for users to be at the same location as a computer in order to reap the benefits of software installed on that computer is becoming an obsolete notion. Time and space are no longer constraints. One of the most discussed impacts of computing and information technology is communication and the easy accessibility of information. This changes the emphasis for research and development – issues such as cultural, political, and economic differences must, for example, be accommodated in ways that researchers have not previously considered. Our goal should be to enable users to benefit from technological advances, hence matching the skills, needs, and expectations of users of available technologies to their immense possibilities.
The conference theme for the SAICSIT 2001 Conference – *Hardware, Software and Peopleware: The Reality in the Real Millennium* – aims to reflect technological developments in all aspects related to computerised systems or computing devices, and especially reflect the fact that each influences the others.

Not only has SAICSIT come of age in the 21st century, but so has the research and development community in Southern Africa. The outstanding quality of papers submitted to SAICSIT 2001, of which only a small selection is published in this collection, illustrates both the exciting and developing nature of the field in our region. I hope that you will enjoy SAICSIT 2001 and that it will provide opportunities to cultivate and grow the seeds of discussion on innovative and new developments in computing and information technology.

Paula Kotzé
SAICSIT President
Running this conference has been rewarding, exciting and exhausting. The response to the call for papers we sent out in March was overwhelming. We received 64 paper submissions for our main conference and twelve for the postgraduate symposium. We had a panel of internationally recognized reviewers, both local and international. The response from the reviewers was impressive – accepting a variety of papers and mostly returning the reviews long before the due date. We were struck, once again, by the sheer magnanimity of academia – as busy as we all are, we still manage to contribute fully to a conference such as SAICSIT.

After an exhaustive review process, where each paper was reviewed by at least three reviewers, the program committee accepted 26 full research papers and 14 electronic papers. Five papers were referred to the postgraduate symposium, since they represented work in progress – not yet ready for presentation to a full conference but which nevertheless represented sound and relevant research. The papers published in this volume therefore represent research of an internationally high standard and we are proud to publish it. Full electronic papers will be available on the conference web site (http://www.cs.unisa.ac.za/saicsit2001/).

Computer Science and Information Systems academics in South Africa labour under difficult circumstances. The popularity of IT courses stems from the fact that IT qualifications are in high demand in industry, which leads in turn to a shortage of IT academic staff to teach the courses, even when posts are available. The net result is that fewer people teach more courses to more students. IT departments thus rake in ever-increasing amounts of state subsidy for their universities. These profits, euphemistically labelled "contribution to overhead costs", are deployed in various ways: cross-subsidization of non-profitable departments; maintenance of general facilities; salaries for administrative personnel, etc. Sweeteners of generous physical resources for the IT departments may be provided. We have yet to hear of a University in South Africa where significant concessions have been made in terms of industry-related remuneration. At best, small subventions are provided. As a result, shortages of quality staff remain acute in most IT departments – especially at senior teaching levels. What is even worse is that academics in these departments have to motivate the value of their conference contributions and other IT outputs to selection committees, often dominated by sceptical academic power-brokers from the more traditional departments whose continued survival is underwritten by IT's contribution to overhead costs.1

The papers published in this volume are conclusive evidence of the indefatigability and pertinacity of Computer Science and Information Systems academics and technologists in South Africa. We are proud to be part of such a prestigious and innovative group of people.

In conclusion, we would like to thank the conference chair, Prof Paula Kotzé, for her support. We also specially thank Prof Derrick Kourie for his substantial contribution. Finally, to all of you, contributors, presenters, reviewers and organisers – a big thank you – without you this conference could not be successful.

Enjoy the Conference!
Karen Renaud & Andries Barnard

Abstract

Information is a very valuable resource and must be protected against harmful attacks from inside as well as outside the organization. As a resource, information is the lifeline of many organizations and is therefore vital for the survival of any organization today. Information security has developed over the last 50 years due to different development trends that have an influence on the information security environment. Information security development trends that can be clearly identified in the information security environment are best practices, certification, awareness, and the measurement of information security.
