psychology, scientific discipline that studies psychological and biological processes and behaviour in humans and other animals.

The discipline of psychology is broadly divisible into two parts: a large profession of practitioners and a smaller but growing science of mind, brain, and social behaviour. The two have distinctive goals, training, and practices, but some psychologists integrate the two.

In Western culture, contributors to the development of psychology came from many areas, beginning with philosophers such as Aristotle and Plato. Hippocrates philosophized about basic human temperaments (e.g., choleric, sanguine, melancholic) and their associated traits. Informed by the biology of his time, he speculated that physical qualities, such as yellow bile or too much blood, might underlie differences in temperament (see also humour). Aristotle postulated the brain to be the seat of the rational human mind, and in the 17th century Descartes argued that the mind gives people the capacities for thought and consciousness: the mind "decides" and the body carries out the decision—a dualistic mind/body split that modern psychological science is still working to overcome. Two of the founding fathers of psychology as a formal discipline and science, which occurred late in the 19th century, were Wilhelm Wundt in Germany and William James in the United States. James's The Principles of Psychology (1890) defined psychology as the science of mental life and provided insightful...

The reach of a hepatitis B vaccination programme among men

Baars, Jessica E; Boon, Brigitte J; Garretsen, Henk F; van de Mheen, Dike

Homosexual contact is a major risk factor for acute hepatitis B infection. This study explores how many and which men who have sex with men (MSM) are reached by the ongoing hepatitis B vaccination programme in The Netherlands (started in 2002), and investigate reasons for non-participation and non-compliance. In this cross-sectional study, on the basis of ethnographic mapping and targeted sampling, 320 MSM were interviewed at different venues in three regions in The Netherlands. Of the sample, 74% reported to be aware of the opportunity to obtain free hepatitis B vaccination, and 50% reported to be vaccinated (received at least one injection). Compliance with the three-dose vaccination schedule was 84%. The most important reason for non-participation in the vaccination programme was a low perceived risk of getting infected with the virus. A personal approach by STD-prevention workers, the recruitment region and having sex with casual partners were positively associated with vaccination uptake. Being bisexual was negatively associated with, and visiting gay bars/discos was positively associated with, awareness of the opportunity to obtain free hepatitis B vaccination. This study shows a large proportion of MSM is aware that they could opt for free hepatitis B vaccination. Future vaccination programmes should focus on a personal approach, since the use of STD prevention workers was shown to be a successful tool for participation in the vaccination programme. The personal information should focus on perceived risk of infection, since this was a major reason for vaccine refusal.

UNE PENSÉE DE PRENDRE LA CCPPC COMME CHINOISE INSTITUTION DE SURVEILLANCE PROFESSIONNELLE DE COMPORTEMENT INCONSTITUTIONNEL CHINOIS TOUT EN APPLIQUANT LE DROIT

ZHAO Qian

Abstract: Since unconstitutional behavior has its duality, it is necessary to establish a separate supervisory system of unconstitutional behavior in applying law, which could together with supervisory system of unconstitutional behavior in legislation build Chinese dual-track constitutional supervisory system. The constitutional status of CPPCC is rather obscure, thus it becomes necessary to enrich its main functions by taking it as Chinese professional supervisory institution of unconstitutional behavior in applying law. As the

J.B. Jackson, cultural geographer: evolution of an archive

The Authors
Audra Bellmore, University Libraries, University of New Mexico, Albuquerque, New Mexico, USA
Claire Lise Bénadou, University Libraries, University of New Mexico, Albuquerque, New Mexico, USA
Saver Bordaianu, University Libraries, University of New Mexico, Albuquerque, New Mexico, USA

Abstract
Purpose – The purpose of this article is to document the acquisition and processing of an important landscape architecture archive, the J.B. Jackson Collection, and making it available for scholars and researchers.

Design/methodology/approach – The first part of the article describes the importance of Jackson’s contribution to landscape architecture and his professional legacy. This legacy consisted in a large collection of slides, scattered among various individuals and institutions. The authors then address how the various parts of the collection were identified, acquired, digitized and brought to the University of New Mexico (UNM). Metadata creation and issues of copyright are also discussed.

Findings – The paper finds that it requires considerable professional effort and networking to take a working collection and transform it into an archive that has intellectual cogency.

Research limitations/implications – UNM’s effort to acquire, preserve and make this collection widely available will inspire future scholars and spark new ways of looking at landscape.

Practical implications – The extensive restoration needed for the Jackson slides warranted a vendor with museum experience, in this instance, Two Cat Digital. Metadata creation requires training qualified personnel. Copyright limitations dictate how the slides display.

Originality/value – J.B. Jackson defined the vernacular landscape. This project made his distinctive and important collection available to the research community. The paper also discussed the process of taking a working collection and turning it into a bona fide research tool.

had arrived. Although Prymate falls short of perfection, it certainly fulfills one of the possible aims of art: promoting spirited debate among its viewers.

TRISH THOMAS HENLEY
Florida State University

When The Normal Heart by Larry Kramer premiered in New York in 1985, it was a powerful statement. The play vividly depicted the struggle and reality of AIDS and its impact on the gay community. Now, nearly three decades later, the play is being staged again, this time in New York City at the Joseph Papp Public Theater, directed by David Esbjornson.

The production, which opened on April 29, 2004, was a critical success, with many reviewers praising its performances and direction. The cast included well-known actors such as Kevin Kline, John Lithgow, and Taylor Hackford, among others.

The play opens with a scene set in a hospital, where several characters are presented with the devastating news of their diagnoses. The characters, who are all gay men, react in different ways, some with anger and frustration, while others express acceptance and resignation. The play then moves on to depict the reaction of the public and the media to the AIDS crisis, with a particular focus on the role of the media in shaping public opinion.

The play is a powerful reminder of the past and a call to action for the present. It is a poignant reminder of the lives that were lost during the AIDS crisis and a call to remember the lesson of history.

The production was met with critical acclaim, with many reviewers praising the performances and the direction. The play was a powerful reminder of the past and a call to action for the present. It is a poignant reminder of the lives that were lost during the AIDS crisis and a call to remember the lesson of history.

Current Implementation Challenges - WebBridge

- Linking levels differ per platform, e.g.
  - Oxford Journals Online – Article (pdf) level linking
  - Academic OneFile & Project Muse Premier – Article title level linking
- The coverage load is still in process (not all subscription titles have been loaded)
- Unisa might not have full-text access for the requested titles

Therefore, WebBridge may give error messages

The purpose of this study was to observe differences in HIV characteristics between the foreign and US born HIV population. The study sample consisted of individuals, ≥13 years of age, who have been diagnosed with HIV and are patients of the Lexington Bluegrass Care Clinic. For the comparison analysis, the sample was divided into two groups (n = 1070), foreign born and US born. Compared to US born patients, foreign born patients were younger at the time of their HIV diagnosis (31 years vs 36 years, P = 0.005), of Hispanic origin (63.1% vs. 1.1%, P < 0.001), and reported heterosexual contact as their mode of transmission (67.7% vs. 33.9% P < 0.001). Foreign born patients enrolled into care at a much lower CD4+ count and compared to the US born, they were more likely to be classified as late testers (53.9% vs. 32.8%, P = 0.006). There were many differences found between foreign born and US born HIV patients. Upon enrolling into care, foreign born individuals were more likely to have multiple OIs and have an AIDS diagnosis. In regards to testing, foreign born individuals were more likely to have tested late for HIV compared to their US born counterparts.
