THE FIRST OF ITS KIND.

The Levulaite press has very generously undertaken to print and publish a new Shangana song called "Shikonde." This song has been composed by a Shangana and it is the FIRST OF ITS KIND to be published in this language. It is written in a European air.

 Simply pour this publication by buying it. If the publisher sees that the Shangana is in need, then they will immediately publish more Shangana song - try it, and try it, and keep it, keep it. Preserve the Shangana language. So, keep it. Dr. Rosset, C.P. Levulaite, C.P.

Every drop of funds we are going to collect-style the rest of the songs and they will be sent to those that have already paid us the 5/..."

Dr. Rosset Addressed the Veldeza School: In Wednesday 9th May at C.P.M. in the Veldeza Church, Dr. Rosset addressed a number of scholars and parents on Religion, the Jews of Switzerland. It is in South Africa on a holiday tour Israel (a Second Chance). The village with its wonderful stone walls, fabrics, ruins.

From here they proceeded Veldeza, where they listened to the beautiful voices of the children of the school who rendered some fine music. In his address Dr. Rosset analyzed the life history of the Veldeza work - of small. In the water it undergoes a change. It begins to act and facts about in the water. At this stage it is very dangerous anybody who swags in this water must take precautions.

The body should not be exposed to strong wind or cold, or drink alcohol, as this weakens the immune system. The children who are exposed to this disease are advised to see a doctor immediately. The symptoms of this disease include headache, fever, vomiting, and stomach pain. The disease can be prevented by taking precautions and seeking medical attention immediately.

The disease is caused by a parasite that enters the body through the skin, most commonly through the feet. Once inside the body, the parasite travels to the liver and causes inflammation. The disease is typically self-limiting and resolves on its own, but in severe cases, it can lead to liver failure and death.

Dr. Rosset strongly advised the people to wash their hands many times during the day. After having entered the mouth the worm is swallowed. It travels round the body until it comes into the liver (chifungu) where it lays some millions of the eggs. Some of the eggs pass out and start infecting the liver and other organs. But these eggs are usually not able to make it to the liver and stay in the digestive system.
