FEBRUARY 2004
I declare that THE INFLUENCE OF WORKPLACE SUPPORT PROGRAMMES ON THE JOB PERFORMANCE OF HIV/AIDS INFECTED EMPLOYEES is my own work and that all the sources that I have used or quoted have been included and acknowledged by means of complete references.

Mr M.S. Cloete

DATE
ACKNOWLEDGEMENTS

I would like to express my sincere thanks to the following people who made this study possible:

(1) My wife and my sons for their constant patience, support, encouragement and understanding.

(2) The medical practitioners and nursing staff at the various private medical practices, medical clinics and hospitals for their assistance, understanding and advice during the empirical research phase.

(3) The participants who were willing to share their experiences so that others could benefit from the results of this study.

(4) Dr Gary Maartens and Dr Steve Andrews for their advice, support and general enthusiasm and dedication that they display toward enhancing the quality of life of those living with HIV or AIDS.

THE INFLUENCE OF WORKPLACE SUPPORT PROGRAMMES ON THE JOB PERFORMANCE OF HIV/AIDS INFECTED EMPLOYEES

by M.S. Cloete

Degree: Master of Commerce

Subject: Industrial and Organisational Psychology

Supervisor: Prof J P R Joubert

SUMMARY

The HIV and AIDS pandemic is arguably the greatest threat facing the world today. The pandemic has a far-reaching impact on society, including the workplace. The effect in the workplace is observed in various areas including a reduction in certain skills levels, mortality and declining job performance of employees living with HIV or AIDS. In addition, the fear of discrimination and stigmatisation prevents infected employees from disclosing their HIV status, thus driving the pandemic underground. Despite the potential negative impact that is looming, many employers still do not have any workplace support programmes in place to manage HIV and AIDS in their organisations. However, some employers have implemented workplace support programmes. This research thus explored the influence of workplace support programmes on the job performance of employees that were living with HIV or AIDS. The findings suggest that job performance is positively influenced where workplace support programmes have been implemented.

KEY WORDS

Acquired Immune Deficiency Syndrome (AIDS), Human Immunodeficiency Virus (HIV), job performance, self-concept, psychological contract, influence of HIV or AIDS on individual job performance, workplace support programmes, discrimination, stigmatisation and cost of HIV and AIDS to organisations.
